## ❖ Features

- \* The CombiSpin Centrifuge is ergonomically designed for centrifuging relativelySilent, constant and stable, touching panel.
- \* Small volumes of biological fluids at speeds of up to 10,000 rpm.  
It is particularly suited to Veterinary Practice laboratories.
- \* The CombiSpin has been designed for fast, simple, intuitive and safe operation.
- \* The single rotor can hold both microhaematocrit capillaries and larger plastic tubes up to 2ml in volume therefore avoiding the need to change rotors.
- \* Three pre-set optimised speed/time programs are available for serum/plasma, microhaematocrits, and urine sediments and accessed by one click of a key.
- \* However, both speed and time can each be simply changed incrementally in case different settings are required for 'special' samples.
- \* Plastic tubes of up to 2ml in volume are placed in angled tube holders in the rotor and microhaematocrit glass capillaries are fitted horizontally in grooves on top of the rotor.
- \* A screw on rotor lid is provided for use when running microhaematocrits (it is not needed when running plastic tubes on their own).
